

```
ok boot -a /retry reboot the system
ok boot -r /force reboot the system
ok printenv /to verify the current status environment
ok setenv boot-device disk
ok setenv diag-switch? False
ok setenv diag-device boot
ok probe-ide
ok boot -a
```

```
# IMPORTANT to verify these environment
# boot-device
# diag-switch
# diag-device
# If the issue persists, suspected the HDD is corrupted
# Proceed clone new HDD and configured based on documentation
```
