

Steps below to solve network issue/failed boot up
Open terminal write this command : Ifconfig -a
Note : It displays Ifcfg-eth0/1 for our references

Backup the old 70-persistent file
Follow this command
mv /etc/udev/rules.d /70-persistent-net.rules mv /etc/udev/rules.d /70-persistent-net.rules.backup

Make sure below files are tally based on [ifconfig -a]
IMPORTANT : Do not rename only ifcfg-eth file [Edit file when needed]
Follow below commands
more /etc/sysconfig/network-scripts/ifcfg-eth0
more /etc/sysconfig/network-scripts/ifcfg-eth1

Reboot the PC
70-persistent will create based on ifcfg-eth0/1
